## 3 STEPS TO OSHA HCS 2012 COMPLIANCE

### Preparing for GHS

The primary benefit of aligning the OSHA HCS to GHS is to increase the quality and consistency of information provided to workers, employers and chemical users. With GHS, employers will be able to facilitate employee training on the health, physical and environmental hazards of chemicals used in the workplace, thereby improving downstream risk management.

### 3 Steps to OSHA HCS 2012: *SDSpro* can HELP!

Given the manufacturers' reclassification of their chemical products to comply with OSHA HCS 2012, all employers in the United States need to review and update their HazCom plans accordingly.

#### HERE'S HOW:

#### **Step 1) Conduct a Physical Chemical Inventory of the Products in the Workplace**

Capture and record chemical and manufacturer information with the *SDSpro* Mobile Data Collector or have our Onsite Chemical Inventory team assist you in identifying hazardous chemicals at your facility.

#### **Step 2) Acquire New and Updated Supplier SDSs for Hazardous Materials**

Our *SDSpro* Services team will source your SDSs directly from the manufacturer and index key fields for easy employee SDS access and EH&S reporting, including SARA Title III/Tier 2 and DHS Chemical Inventory.

#### **Step 3) Ensure Free, Unlimited SDS Access to Your Employees and Chemical Users**

*SDSpro* offers multiple options for electronic SDS distribution, including *SDSpro* SaaS (software as a service) for those companies with limited or unavailable IT resources.

#### **SDS and Label Authoring**

Our *SDSpro* Regulatory Services team authors globally-compliant finished product SDSs and labels for worldwide distribution. We also provide global regulatory data on substances and mixtures for manufacturers who use an in-house SDS authoring software application.

***SDSpro* is THE global leader in SDS and chemical management.
